

Chapter 4: Energy Use in Community Buildings

Page 1

Sample textbook page for accessibility and tactile-graphics testing

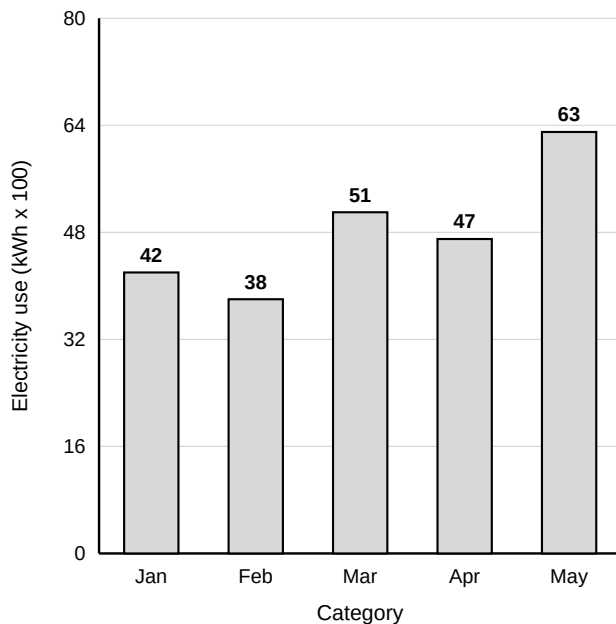

Reading the Graph

The bar graph shows monthly electricity consumption for a small community learning centre from January to May. Each vertical bar represents one month, and the number printed above the bar gives the measured value.

The first four months remain relatively close, while May has the highest electricity use. March records the second-highest value. Because the vertical axis begins at zero, the relative heights of the bars can be compared directly.

Bar graphs are useful for comparing values that belong to separate categories. Readers should always check the axis label, scale, and category labels before interpreting a chart.

Figure 4.1 - Monthly Electricity Consumption

Study note

Compare the height of each bar with the numbered vertical scale. Check the unit before interpreting the values.

Questions

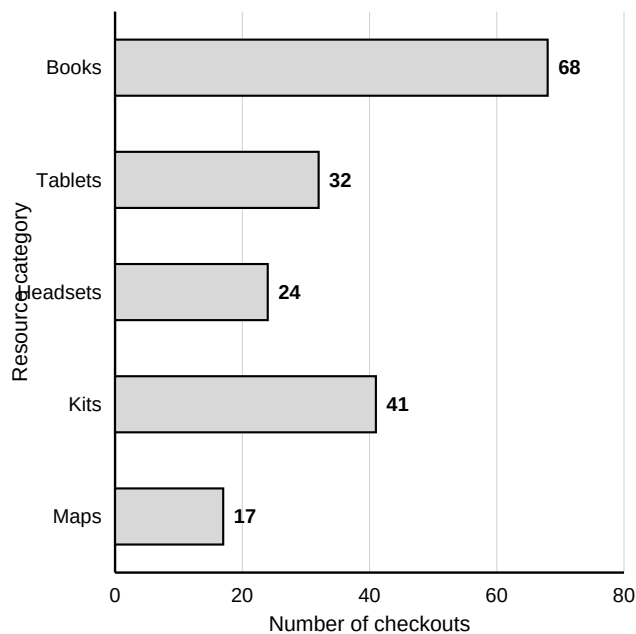

1. Which month has the highest electricity use?
2. How much greater is May than February?
3. Which two months have the closest values?

Chapter 5: Library Resource Usage

Page 2

Second test page with a horizontal bar chart and numeric labels

Figure 5.1 - Weekly Resource Checkouts

Comparing Categories

This horizontal bar graph compares the number of resources checked out from a school library during one week. Horizontal bars are useful when category names are longer or when the chart is easier to read from left to right.

Books have the largest number of checkouts, followed by science kits and tablets. Maps have the smallest value. The numeric labels at the end of each bar make the exact values easy to verify.

A faithful tactile conversion should preserve the chart orientation, category order, numeric values, axis meaning, and relative bar lengths.

Accessibility note

For testing, the chart intentionally uses clear labels, strong contrast, a zero baseline, and one data series.

Questions

1. Which resource has the highest number of checkouts?
2. What is the difference between Books and Tablets?
3. Which category has a value of 41?
