

# Community Learning Centre Report

Page 1

Text and simple table page with no chart

## Weekly Participation Summary

This page intentionally contains no diagram. It is designed to test whether Emboss can process ordinary text and a simple rectangular table without incorrectly classifying either region as a chart.

The learning centre records attendance for four activities. The figures below represent the number of participants recorded during one week.

| Activity         | Participants |
|------------------|--------------|
| Reading Club     | 24           |
| Computer Lab     | 31           |
| Science Workshop | 18           |
| Art Session      | 27           |

### Notes

The table has one header row, no merged cells, and a simple rectangular structure. It should remain eligible for the v1 table-processing path.

### Question

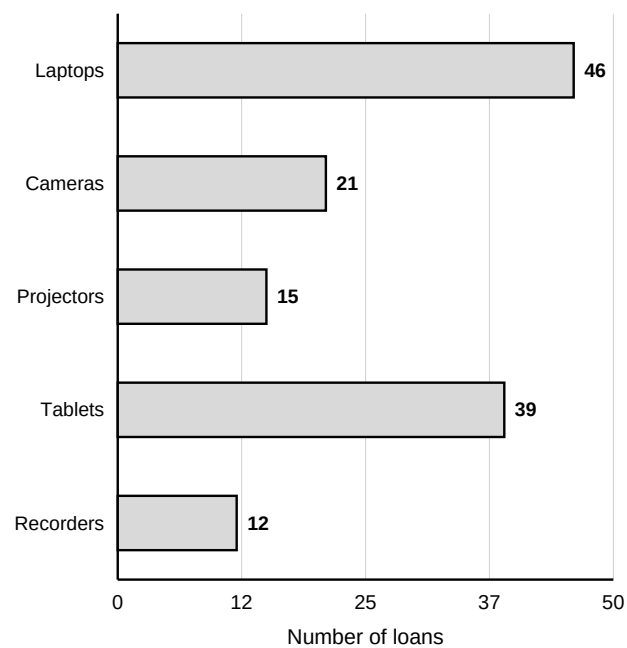

Which activity recorded the highest participation?

# Community Learning Centre Report

Horizontal bar chart to test orientation handling

Figure 2.1 - Equipment Loans

## Comparing Equipment Use

This horizontal bar chart compares the number of equipment loans during the month. Laptops are the most frequently borrowed item, while audio recorders are the least borrowed.

Horizontal orientation is intentional. The conversion system should not silently transform the source into a vertical chart during data extraction.

Numeric values are printed near the end of each bar so extraction can be checked against the source image.

### Test condition

Expected orientation: horizontal. Expected maximum value: 46.

## Questions

1. Which equipment type has 39 loans?
2. How many more laptop loans than camera loans?
3. Which equipment type has the lowest value?
